

Chain Jewellery Design with Keith Lo Bue

This is a 2 day workshop

In the search for interesting materials with which to create, the greatest surprises can come from the most unexpected quarters. Take, for example, a cheap, ubiquitous and unassuming roll of steel wire, sold for use in the construction industry...

With some simple tools and layman-ready information, this mundane material comes thrillingly to life. Super-strong, versatile and - best of all - *beautiful*, this amazing wire can perform like no other material can.

Join internationally-known artist and found-object 'stuffsmith' Keith Lo Bue as he delves into the world of steel wire creativity. Whether you're interested in jewellery, sculpture, mixed-media, textiles or any number of other creative pursuits, this workshop will provide in-depth information and instruction on safely, efficiently and properly working with and caring for this magic stuff.

During the two days of class you'll create a variety of stunning designs. Clasp and bail ideas will be discussed and shown as well. No previous metals experience necessary, just enthusiasm and the desire to learn.

Date: Sat 15th – Sun 16th June
Times: 10.00am – 4:00pm
Cost: \$200
Venue: Textile Room
Middle Cove Campus

Create beautiful things with steel wire from one of the artists responsible for bringing it to a mainstream audience and making it such a popular alternative to precious metals.
