

Unlike sewerage, rain and other runoff from your street and around your home is not treated.

This water is known as 'stormwater' and flows into the nearest waterway.

Stormwater becomes polluted when it picks up litter, dog droppings, leaves and oil from the streets and around your home.

This polluted water harms the wildlife that lives in the bush, Scotts Creek and Middle Harbour.

The Swamp Wallaby, a special resident of the Scotts Creek catchment.

## Enjoy your local bushland

Your suburb has many beautiful bushland reserves for you and your family to enjoy.

Visit the restored banks of Scotts Creek in Muston Park or explore the Middle Harbour foreshore tracks of North Arm and Harold Reid Reserves.

Council also runs free guided bushwalks and has guide maps for many walking tracks and reserves.

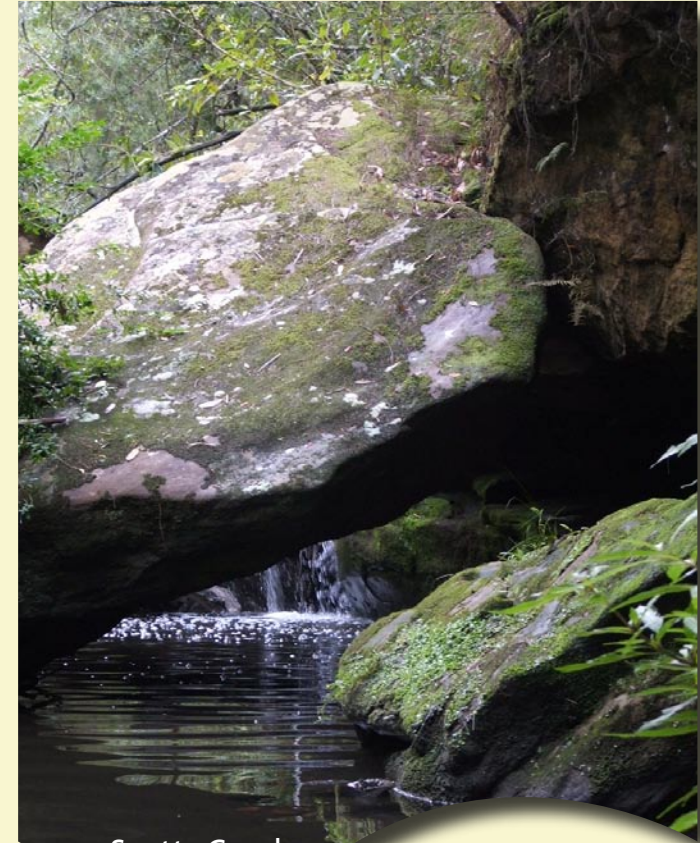

**For more information or to receive the Bushwalks Program and guide maps, please contact Council's 'Streets to Creeks' Coordinator.**

# Did you know Chatswood, North Willoughby, Castle Cove and Middle Cove...

Scotts Creek

## are in the Scotts Creek catchment?

# Can you find your street?

If it's within the yellow line, you live in the Scotts Creek catchment.

This means that the stormwater from your street flows through the bush and into Scotts Creek and Middle Harbour.

SCOTTS CREEK
